

EBE Team Ethbank & Eth-exchange Whitepaper

Content

1 Project Overview

1.1 Simple Introduction:

Ethbank: It is an investment and venture capital in blockchain industry. Ethbank will incubate new blockchain startup projects. It will help these project teams to legally raise and enter the market. When all of its future incubation projects start ico, they will report to the SEC 15 days in advance.

Eth-exchange: Eth-Exchange is an integrated virtual currency trading platform. It will become a collection of tokens, CFDs, foreign exchange transactions, futures indices, option prices, ETFs, etc.

1.2 Project Framework

Ethbank: First Part: Project incubator and team development. We will look for good teams and projects and analyze their needs, development abilities and prospects to create great miracles. We will look for good teams and projects and analyze their needs, development abilities and prospects to create great miracles. The services we can provide for them are: helping them develop platform systems (including their own trading systems), technical, legal, financial information consultants, raising funds for them, and auditing through the SEC's Exempt Offering.

Second Part: Ethbank is financing the project so that they have enough funds to operate. Its original investment banking joining mechanism allows more clients who can pass advanced audit to apply for a small agency financing agency to

obtain tokens at 80% of the price and conduct a primary market sale.

Eth-Exchange: Eth-Exchange is an integrated investment management platform with a wide range of products for investors to invest in. All transaction data will be transparently displayed.

1.3 The value of EthBank & Eth-Exchange:

Eth-Bank: As an industry incubator of the blockchain, Eth-Bank will make a considerable contribution to the gathering of talents, teams, projects, and funds in the blockchain industry. It speeds up the financing and solves the problems that traditional teams lack.

Eth-Exchange: As a carrier of funds and projects, it has well-balanced the efficiency of decentralized and the fairness of centralization. As an integrated investment platform, it brings investors various investment products and trading methods to promote the promotion of inclusive finance.

- 1.4 In the past year, we have seen the growth of many exchanges, but with prosperity, it is brutal. The exchanges guarded themselves from theft, charged high fees and rejected outstanding projects. But no doubt, the necessity of the virtual currency trading market can be determined.
- 1.5 EBE token is our virtual currency created through the design of Ethereum ERC20 in Ethbank and Eth-exchange transactions

and research. It will confirm the transaction for this system.

Its role: 1, EBE will be used as a fee for Ethbank and Eth-exchange.

- 2, Member priority rights. In the process of placing virtual currency on the market, the operating team needs to present a large number of tokens for publicity. Investors who hold EBEs will receive these gift tokens based on the EBE holdings.
 - 3, The establishment of investor protection funds. Each year, Ethbank and Eth-exchange will use 20% of their profits to establish investor protection funds to deal with serious losses caused by hackers and force majeure. The fund was established by the EBE team and announced the fund account address. Its funds are stored using EBE token and ETH.
- 1.6 As we all know, token investment is the most widely used industry in the blockchain. A large number of initial funds have been derived here: There are individuals or companies that use personal Kyc to help others invest in ico projects. They are the most primitive funds. However, unregulated private equity, completely anonymous currency circulation, unconfirmed fund managers, and the use of unapproved funds have caused serious economic crimes such as rat positions and fraud. They need regulation, and they need a complete fund system to make it work.

2 Token Sales Terms

| 2.1 Token sales basic information | | |
|--------------------------------------|---|--|
| Name | ethbankexchange | |
| Abbreviation | EBE | |
| Token Supply | 1,000,000,000 | |
| Token contract address | | |
| Token Liquidity | 1,000,000,000 | |
| Token Standard | Token ERC20 | |
| 2.2 Token sales detailed information | | |
| Locking mechanism | Each year, Ethbank and Eth-Exchange extract 20% of their profits, buy back EBE, and use it to establish investor protection funds. The fund's account address will be disclosed and investors | |
| | will be asked about the size of the protection fund. Protection funds will be used to compensate for investor losses when dealing with hacker attacks or force majeure events | |
| Token use | EBE can be used as a transaction fee. | |
| | EBE can be used as a priority for liquidation. When the exchange encounters events such as force | |

| | majeure and hacking, the exchange will make statistics on customer losses and the Investor |
|-------------------------------|---|
| | Protection Fund will give priority to compensating EBE holders. |
| Token sales area restrictions | Tokens must not be distributed to Citizens, natural persons and legal persons in the area in any |
| | country in the United States (including its states and the District of Columbia), Puerto Rico, the |
| | British Virgin Islands, the United States, or where digital token transactions are prohibited or in |
| | any way limited by applicable laws or regulations. |
| | |

2.3 Token distribution terms

Distribution mechanism:

Whenever 10 Tokens are released,

There will be 20 Tokens for investor protection funds,

There will be 20 for team operations,

There will be 10 incentives for team member,

There will be 35 rewards for trading volume,

There will be 5 for community maintenance and registration.

2.4 Token sales terms

| Sales Times | June, 2018 |
|-------------|------------|
|-------------|------------|

| Sales Prices | 1ETH=5000EBE |
|----------------------|--------------|
| Goal (Soft Cap) | 5000ETH |
| Hard Cap | 20000ETH |
| Minimum Contribution | 0.1ETH |
| Maximum Contribution | 100ETH |

3 Route planning

We build and maintain this exchange system and expand our community power. Six months after the exchange system is online, we will begin the development, testing and application of blockchain games.

We will develop our own game system based on ERC-721. Our estimated time is 6 months to 12 months. It will become an independent game network, a decentralized system that covers poker games (such as Texas Hold'em), Pet Games (Like Crypto Kitties), and resource games (such as Minecraft). By then, EBE will still be used in these games, it will play a role in payment.

| Time | Goal |
|-----------------------|---|
| May 2018 | Establish and complete the exchange system network. |
| June 2018 to Nov 2018 | Update and optimize the exchange system network; Maintain and expand the community. |

| Nov 2018 | Start blockchain game development and testing; We will ask investors for game |
|----------|---|
| | development advice and directions. |
| Jan 2019 | Poker card online game development completed. |
| Mar 2019 | Pet online Games development completed. |
| May 2019 | Resource online games (such as Minecraft). |
| After | The establishment and optimization of the game system. |

Disclaimer

Developing complex products is a non-linear process. In the process, changes and adjustments may need to be made. The roadmap reflects our current understanding of the order in which modules are implemented. We continue to understand the market, industry professionals, trader teams and investors, and adjust the process and order accordingly.

Our team is doing its best to provide modules and other key system components. Here you can find time frame estimates of when the major functional modules on the platform are available. The information in this table is preliminary and will be changed by our team as appropriate. The rationale behind which we will make such decisions is what we think will bring the greatest value to our business.

4 Platform, technic & safety

4.1 How does Eth-Fi protect customer funds?

We will establish a comprehensive investor protection fund mechanism to deal with the losses caused by illegal hacking attacks and force majeure. The Investor Protection Fund will be based on a 20% EBE token. In order to ensure the continued operation of the Eth-Fi Investor Protection Fund, Eth-Fi will use 20% of its profits each year to repurchase EBE tokens on the market and allow them to enter investor protection funds.

4.2 Business model diagram

Technical Disclaimer

We live in an era of rapid technological development. The above description is based on our current knowledge and current state of the art. The Block-Fund development team reserves the right to change the methodology, architecture, technology stack elements, etc. to prevent future research and development efforts that may provide us with better options to solve our technical challenges.

5 Development Strategy

The first stage: We establish a trading system that integrates the primary market with the secondary market. All primary market projects will be rigorously reviewed, including the use of funds and compliance audits. All projects in the primary market will enter the secondary market after success and allow investors to conduct secondary market transactions.

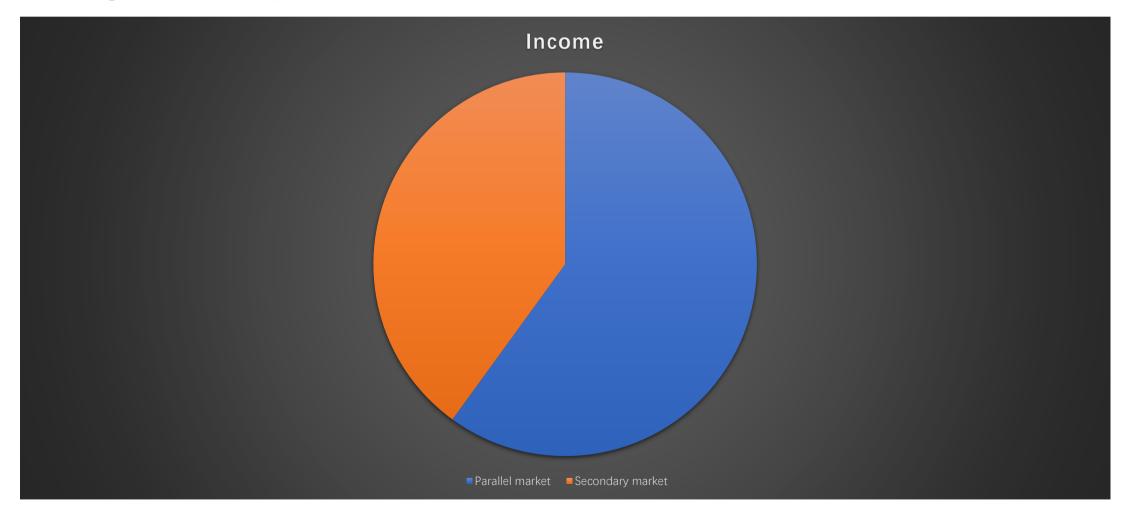

The second stage: After completing the establishment and maintenance of the trading system, under the premise of abundance of

cash flow, we will start the game platform plan. Based on the ERC-721 system, we will develop games based on the blockchain system.

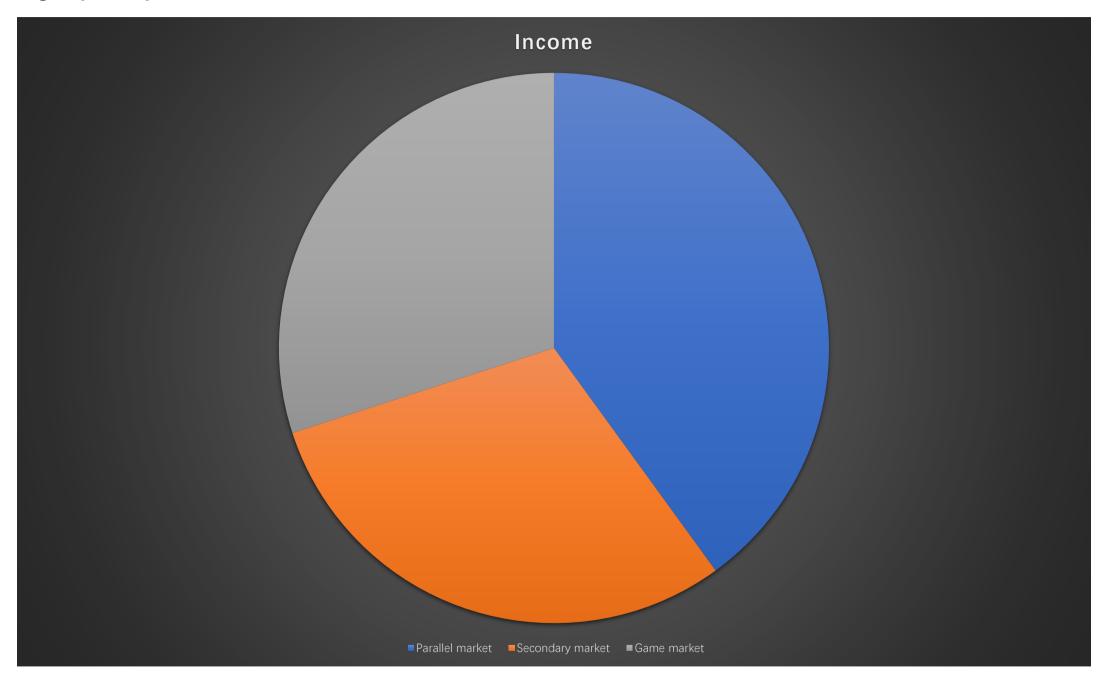

6 Finance Prediction

6.1 Income

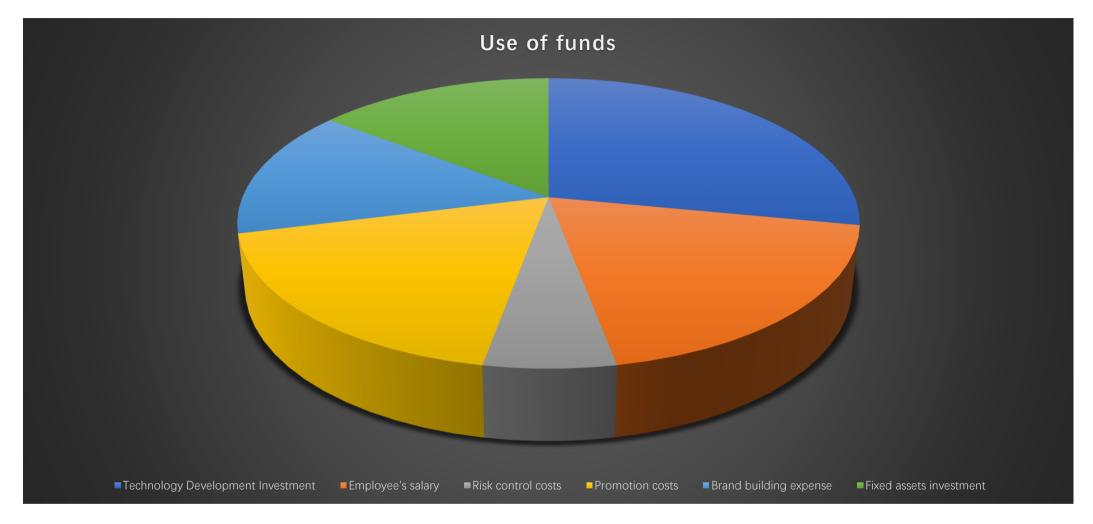

Initial stage: 6 months (May 2018 to Nov 2018)

High-speed operation (After Nov 2018)

6.2 Use of funds

7 Allocation of tokens

Tokens (compatible with the practical tokens of the Ethereum ERC-20 standard) will promote the participation of the participants on the platform and serve as a platform for access rights as well as the platform's internal currency.

Platform participants can obtain tokens in three ways:

- 1. Participate in ICO.
- 2. Buy tokens on cryptocurrency exchanges.
- 3. Earn coins by taking action and completing tasks within the platform.

8 Token Disclaimer

EBE Token Disclaimer

What is EBE Token

EBE Token is a virtual currency with encryption elements sold as a utility tool for the Ethbank & Eth-exchange platform.

EBE Token is based on the Ethereum protocol and complies with the widely adopted ERC-20 standard.

EBE Token has its functional utility within the Ethbank & Eth-exchange platform only, and its generation is subject to the internal economic development needs of the Ethbank & Eth-exchange platform ecosystem and will be transparent and fair in the Ethbank & Eth-exchange community. relationship.

EBE Token is used by its holders only for specific purposes. The number of such purposes may increase over time, including but not limited to the addition of new services and features that can be used to redeem EBE Tokens. EBE Token is designed for experts dealing with encrypted EBE Tokens and blockchain-based software systems.

Use of EBE Token

Use the Ethbank & Eth-exchange platform and interact with it. The EBE Token carries the main functions of the Ethbank &

Eth-exchange platform.

The full functionality of the Ethbank & Eth-exchange platform is only available to EBE Token holders. We plan to provide the EBE Token with an opportunity to openly purchase the EBE Token on an encrypted EBE Token exchange (residents of countries in which the purchase of EBE Token does not violate local laws). Users seeking to enter the Ethbank & Eth-exchange platform will have to purchase EBE Tokens on such exchanges. Conversely, if the holder wants to exit the ecosystem, the EBE Token can be sold on the exchange.

However, legislation on the circulation of securities in certain countries (such as the United States of America, the People's Republic of China, Korea, and Singapore) may prohibit the sale of EBE Tokens to its residents. When purchasing the EBE Token, the purchaser should understand the restrictions on follow-up sales of the EBE Token and therefore must follow our instructions and/or instructions from the exchange when reselling the EBE Token to other users.

The expression of community opinions.

The Ethbank & Eth-exchange platform will provide EBE Token holders with the opportunity to express their opinions on specific operational issues of the Ethbank & Eth-exchange platform through a decentralized community voting (DCV) mechanism.

These decisions expressed through the DCV mechanism will serve as an advisory guide for the management of the Ethbank & Eth-exchange platform. The management team and executives of the agency will consistently incorporate the results of the Ethbank & Eth-exchange platform community voting into their consideration.

Billing method

EBE Token will be used as a settlement method for transactions carried out in the Ethbank & Eth-exchange platform. EBE Token holders can use their EBE Token to purchase the services and products provided in the Ethbank & Eth-exchange platform.

The means provided for operating the Ethbank & Eth-exchange platform reward system. The Ethbank & Eth-exchange platform has established a well-balanced incentive system, in particular, to better perform their duties, thereby improving the efficiency of the entire ecosystem and bringing more benefits to the community. To further encourage users to use the Ethbank & Eth-exchange platform, their agents may be rewarded for their active participation in the ecosystem. Compensation will be paid by EBE Token, which allows agents to participate in the growth of the Ethbank & Eth-exchange platform ecosystem

What EBE Token Can't Do

EBE Token cannot be used as a security in any jurisdiction.

This white paper does not constitute a prospectus or any type of offer document, and does not constitute a securities offer or an investment solicitation, does not involve in any way an initial public offering or stock issue/financing, nor does it in any way involve a securities offering in any jurisdiction. EBE Token does not intend to sell, offer, purchase, sell or trade in any jurisdiction that is prohibited by applicable law or requires further registration in any relevant government department.

EBE Token is not a loan of the company.

EBE Token is neither a debt instrument or bond of any nature nor any other form of loan that is prepaid to the company. Whether through the EBE Token sale or other means of obtaining the EBE Token does not imply that the EBE Token holder is

entitled to any financial or any other assets of the company.

EBE Token did not grant the right to participate in the company or its assets.

EBE Token does not provide EBE Token holders with any ownership or other interests of the company. Obtaining EBE Token does not mean that you can use cryptocurrency in exchange for any form of the company's shares or the company's assets (including intellectual property). EBE Token holders are not entitled to any guaranteed form of dividends, income distribution and voting rights.

EBE Token is non-refundable.

The company will not provide EBE Token holders with refunds related to EBE Token for any reason. EBE Token holders will not receive money or other compensation in lieu of refund. About EBE Token's future performance or value has no future and no promise, including a promise of intrinsic value, a commitment to continue to pay, and an assurance that EBE Token has any specific value.
